

## T'rent supplies sustainable LHV combinations to Gebroeders De Vries – DROWA®

For insulation specialist DROWA® Gebroeders de Vries from Dokkum operates 4 sustainable LHV combinations with a loading volume of 162 m<sup>3</sup>. T'rent, in collaboration with the German company H&W Nutzfahrzeugtechnik, provided the superstructure on the trucks and the construction of all the volume rawbars.

This concept was chosen with a view to the accessibility of final destinations in urban areas. Sustainability is also increased by limiting empty kilometers with the option of loading heavier loads due to the terrain weight of 57.5 tons in total.
